

Rental Utility Bill Calculator

A simple Python tool for calculating rental house expenses, including:

- Electricity bill
- Water bill
- Monthly rent
- Total payment

Features

- Calculate electricity usage (kWh)
- Calculate water usage (m3)
- Automatically calculate the total monthly bill
- Simple command-line interface

Project Structure

```
``text
project/
├── english_version.py
├── vietnamese_version.py
└── README.md
``
```

How It Works

The user enters:

- New electricity meter reading
- Old electricity meter reading
- New water meter reading
- Old water meter reading

The program then calculates:

- Electricity cost
- Water cost
- Monthly rental cost
- Total amount to pay

Pricing Configuration

Current pricing:

- Rent: 1,200,000 VND
- Electricity: 4,000 VND / kWh
- Water: 10,000 VND / m3

You can easily modify these values in the code.

How to Run

Run the Python file:

```
```bash
python english_version.py
```
```

Example

```
```text
Enter new electric reading: 120
Enter old electric reading: 100
```

Electricity consumed: 20 kWh

```
Enter new water reading: 15
Enter old water reading: 10
```

Water consumed: 5 m3

```
Total electricity bill: 80,000 VND
Total water bill: 50,000 VND
Monthly rent: 1,200,000 VND
```

```
Total payment: 1,330,000 VND
```
```

Purpose

This project was created for practicing:

- Python functions
- Variables and constants
- User input
- Basic arithmetic operations
- Code organization
